

Generic Assignment Template

Description:

Group Name (Gym Gym)
Write a meaningful description of the assignment.

To develop the frontend part of the website without backend functions, minimal javascript with html and css.

Approach / What I Did:

Write about what you needed to do to complete the assignment.

We looked at the design that we designed for the website from milestone 1 and implemented all the necessary designs that we needed to add into our website. As it's only frontend part, all the functions do not work as it means to be but all the navigations to design of the website are implemented as necessary. We researched styling css how I should implement the website as well as planning how layout should be done with consistent style and learned through what was needed to achieve the desired layout and designs.

We first delegated the workload into pages and we all worked on the report together indicating who did what. So, one did a storefront, checkout page, and etc.. We consistently committing and pushing numerous times as we work on the project and I think it was helpful to get use to using the github.

Issues and Resolutions:

Write about issues you encountered while working on this assignment and how you resolved them.

Daekeun Kim:

1. We had issues merging the same package.json and package-lock.json.
2. script path used wrong file, fixed to [script.js](#).
3. express's static middleware was blocking redirection of index.html to storefront. I just deleted index.html and rerouted with
4. When we were working in the team, some of the class id was duplicated as it affected the css.style and changed to a different id. I think it's a really good idea to have a prior set class id's set to avoid conflicts between duplicates between members in the group.
5. We didn't use index.html but we were having a problem when starting to use get the response from the browser to redirect to storefront.
6. It was really hard to adjust layout of the website as I was working at the main section and I didn't know why my layout was not working until I saw same id named main was affecting my main from other member so I had to change the class name of html file so it does not affect my style.
7. pulling from git was bothersome as I did not know how to properly pull from github and merge into my code which almost blew all of my previous changes.
8. contact form logic was not working and fixed by matching button id and the eventlistener's minor capitalization mistakes.

9. fake login logic was not working due to not matching the file name for `script.js` at the bottom of html. It couldn't find one before which was mistakenly put.

Alex Svenningsen:

- I encountered issues with being able to push my code to GitHub. Solving this was really annoying, and I had to use git pull to fix this and get the code in GitHub, and then I was able to push it.
- I also had a problem with properly loading the website and had to reset that as well with the original Index.html. After this, it ran and had to manually put in which page I wanted to see.
- Other similar problems were traversing through the website via the buttons at the top that should take you to the right page. We just looked through and fixed what was needed, and we got it to work.

Guillermo Velazquez

- wrong git link and commit issues
- dns problem stopped github from working
- missing node module error
- product pages didn't link or align right
- add-to-cart button and js imports didn't work at first

Analysis:

Reflect on what you have learned. Why was this project, step, or milestone important? What did you take away and will remember?

Daekeun Kim:

- I have learned to implement html with css styling with how to manage and design the e-commerce website and that we needed to carefully design our website in order to be functional and consistent. This was a very important milestone as we did the first html site individually, and we were able to fully implement the site design on top of knowledge and experiences that we gained from individual assignment and translate the progress to full functioning web software which in this case, for frontend. I learned a lot from html, css, and how javascript works for the frontend.

Alex Svenningsen:

- I learned how to be able to work in a group in a way where things and the conditions are changing over and over. It isn't a huge thing as we just pulled and pushed when new things were made and added. I took away that many projects and jobs will have similarly collaborative assignments as well and this is a great step to learn more about this.

Guillermo Velazquez:

I learned how to make product pages and a shopping cart using HTML, CSS, and JavaScript. I also learned how to use Git to share and update code with my team. This was important because it showed me how to build and manage a real website with others.

Relevant Code and Screenshots:

Provide several screenshots and code snippets of steps you have taken while working on this assignment. Major key points. The best screenshots show everything that's going on the screen, and show me that you have set things up according to the instructions. (Find a way to take screenshots quickly. The more the merrier.) Code is usually best copy pasted directly into the document and set to a monospace font like courier new.

Item listing pages (we had four but we will reduce it to one and call apis to change to that item category accordingly)

The screenshot shows a product listing page for 'Item 1 Name'. At the top left is the 'GYMGYM' logo. To its right is a navigation bar with links: Home, About, FAQ, Shopping Cart, and Sign Up/Login. Below the navigation is a large 'COMING SOON' sign with two stars at the bottom corners. The product title 'Item 1 Name' is centered above a row of six small, illegible placeholder text boxes. Below the title is the price '\$59.99'. Underneath the price are dropdown menus for 'Size' (set to 'Medium') and 'Quantity' (set to '1'), followed by a blue 'Add to Cart' button. At the bottom of the page is a footer bar containing the copyright notice: '© 2025 GYMGYM — All Rights Reserved'.

About

Aspiring young adults trying to make a change to show your life is in your hands.

Time and time again it always seems that things will not get better. We are here to show and tell you that with a new step in the right direction that your life can change and will get better.

What better way to make a change in your life than to get up and going. At the gym that direction does not matter. Each step you take will lead you to something new and life changing and there is only one way to test that out. There is no better day than today to get going and make some changes for the better.

This HTML file creates a shopping cart page for a website. It includes a navigation bar, a section to display cart items or show an empty cart message, and a checkout button linking to the checkout page.

This is how it looks when code is executed.

Individual product Page

```

This HTML file builds a product detail page for an item. It displays the product image, description, price, and options for selecting size and quantity, along with a button to add the item to the shopping cart. This one in particular shows clothing. The products on the page have the same or similar layouts.

The screenshot shows a product listing for 'Item 1 Name'. At the top is a large teal 'COMING SOON' sign with three small stars at the corners. Below it is the product title 'Item 1 Name'. A descriptive text block follows, stating: 'Description about the item. Add a little more text if needed to fill space — such as the material, comfort, or intended use. Keep it consistent with other product pages.' The price '\$59.99' is displayed in bold. Below the price are dropdown menus for 'Size: Medium' and 'Quantity: 1'. A blue 'Add to Cart' button is positioned next to the quantity input.

This is what the code executes

Use of GenAI:

If you used Generative AI (for coding, writing, graphics, design, for anything) please describe the way or ways you used. Sharing prompts is even better.

Guillermo Velazquez

I used AI to help write and fix code for my product pages and shopping cart. I also used it to explain Git errors and show me step-by-step how to commit and push my work. I mostly used it if I didn't understand things or needed help with bugs in my code.

Daekeun Kim:

I asked such questions like how I can make my item listing categories with images without interfering with the same style that was embedded to main which affected many tags with main and eventually I figured out I should either plan to make a div tag with a separate id. I also used to check error and ask questions about why git was behaving when we were working together as I did not understand what was head and current and if I should merge together within the

current file and or accept both which almost deleted my entire code after pulling and I searched how I can recover my previous stuff and got help. In other perspectives, I did most of the html, but had to search up how I can style with css as I wanted to look exactly if not, very similar to the first draft that we designed which turned out to be okay.
